

Building Optimisation

Sustained building performance improvements through expertise, technology, capacity building and behaviour change.

Is this you?

Asset Managers and Sustainability Managers in the real estate sector, wishing to meet investor ESG requirements and increase the value and long-term performance of their assets.

Benefits abound

- Meet investor demands
- Improved rental income
- Reduced operational costs
- Increased asset value
- Improved occupant comfort and productivity

Break the barriers

Following through on energy targets can be challenging because of the change required through the property and facilities management supply chain. We have the experience and technology solutions to work across all levels of to deliver high level business objectives.

How we help

We conduct a scoping audit for a powerful initial insight into how to achieve and sustain improved building performance. Our highly effective Virtual Energy Manager service provides ongoing performance monitoring through meter data collection, using market leading Envizi software to identify and support the implementation of saving opportunities. Our comprehensive Managed Performance Service has a 0% net cost guarantee. It collects broader performance data from the BMS. Analysis includes opportunities to improve occupant comfort and support condition-based maintenance.
