

Rapid costed decarbonisation **service**

“Costed insights identify the wins, but layering on our implementation expertise gives you confidence on how, where and when to execute. This accelerates the business case for asset decarbonisation.”

Rapid costed decarbonisation **service**

Is this you?

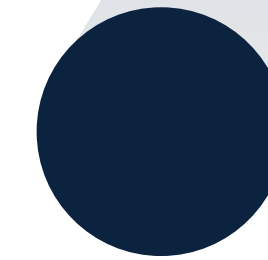

You need to quickly understand the scale of effort, the capital required, and where the big wins are to decarbonise your portfolio.

Drivers

Investor ESG requirements are rapidly evolving and regulations are uncertain. Investors and real estate businesses need to know decarbonisation costs and benefits in order to prioritise action for impact and competitiveness.

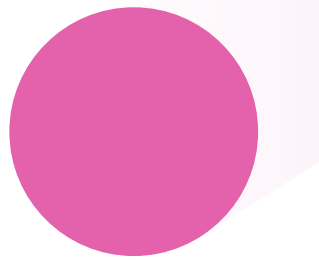

How we help

Traditional decarbonisation roadmaps can be time-consuming and theoretical. We provide a financially quantified view of opportunities, layered with actionable 'how-to' insights. Grounded in years of implementation expertise, we show you your priorities, what to avoid, and the best order to execute.

We can provide rapid costed assessments of a particular asset or across your whole portfolio to pinpoint which decarbonisation opportunities drive the greatest IRR. We do this using our proprietary data and an agile, outside-in methodology.

Benefits

- A financially quantified view of decarbonisation opportunities.
- Don't miss the quick-win value in assets or underestimate the capital required to transition to your target.
- Prioritise decarbonisation across your portfolio and know where to invest for the biggest wins.
- Accelerate your business case with a confident, sequenced action plan that helps you avoid costly implementation pitfalls.
