Carbon management and decarbonisation plans **service**

Is this you?

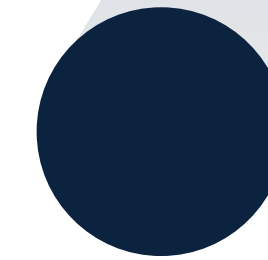

You are a corporate across sectors (including hard to abate) and need a credible baseline, a clear pathway to net zero, bankable interventions and governance to deliver on interim targets.

Drivers

Regulatory disclosure (CSRD), investor/client expectations (SBTi, supplier programs), potential carbon pricing and 2030 milestones create time bound pressure to move from ambition to funded plans and measurable delivery.

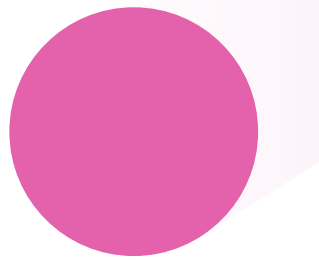

How we help

We provide strategy and delivery so the plan is executable- not just a slide deck. This service includes:

- Implementation of robust GHG accounting aligned to the GHG Protocol;
- Abatement pathway design with cost/benefit and feasibility;
- Scenario modelling;
- Prioritised roadmaps and investment cases;
- Hands-on delivery (e.g., renewables/PPAs, electrification, efficiency) with measurement & reporting built in.

Benefits

With this service you will have an investible, costed roadmap with clear KPIs, faster emissions reductions, stronger non financial reporting, and improved credibility with boards, lenders and customers.
