Head of Sector
Financial Services

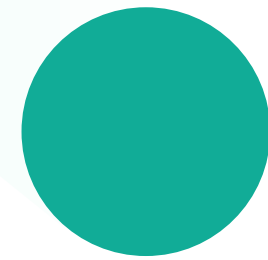

Cost benefit analysis for Portcos service

Is this you?

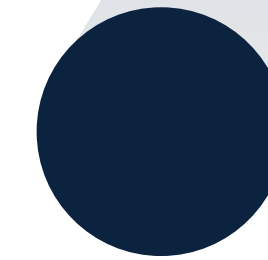

You want to know the CapEx, OpEx and Payback for your portcos setting and achieving their own SBTs.

Drivers

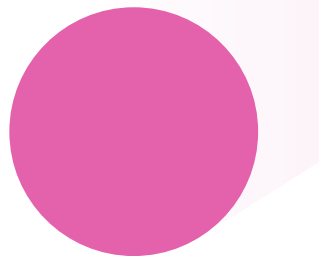

PE firms have set PE SBTs but will need to renew these before FINZ is the only SBTi option from 1st January 2027. Investment Committees will need to approve these new targets and will want to know about the financial implications.

How we help

We provide financial quantification alongside implementation expertise.

Benefits

- An efficient, high-value way to gain portfolio-wide financial clarity.
- Understand what your PE SBT/ FINZ commitments will mean financially across multiple portcos.
- Bridge the gap between high-level strategy (SBTs) and detailed execution (Implementation framework).
- Confidently prove financial feasibility.
- All the details you need to build a plan in the first 100 days.
