Management

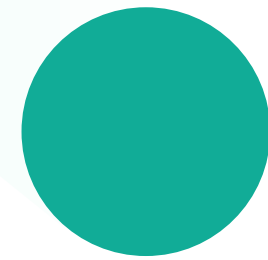

# Energy management service

## Is this you?

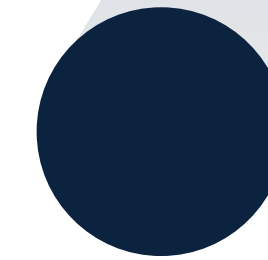

You are an asset/facility manager with multi-site portfolios (productive sites, stations, depots, buildings, offices) wanting to industrialise energy management.

## Drivers

As well as the need to meet decarbonisation targets, many external factors are pushing the need for improved energy management including rising energy costs; ISO 50001 requirements and sustainable finance criteria.

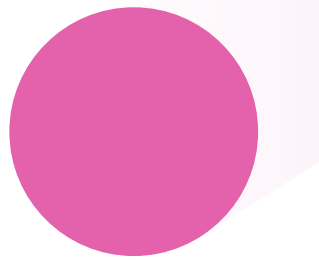

## How we help

The BIP.Verco team have experience of large portfolios and a strong delivery capability. Some of the ways we help infrastructure and transport clients with energy management are:

- Design and implementation of Energy Management Systems;
  - metering/IoT architecture;
  - anomaly and performance analytics;
  - multi year carbon & energy plans; procurement support (including PPAs & BPAs);
- delivery to execution.

## Benefits

- Traceable, measurable savings;
- improved operational control;
- emissions reduction;
- stronger financial/ESG indicators.
