

Incentives service

“Overcome the high upfront costs of sustainable projects and make low-carbon technologies more accessible.”

Danilo Perrucci
Global Head of
Sustainability and Energy
Management

Incentives service

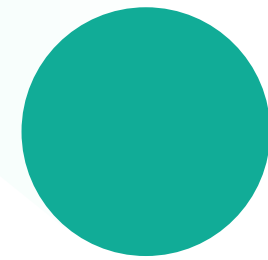

Is this you?

You work in the infrastructure and transport sectors and are seeking funding for sustainability projects including:

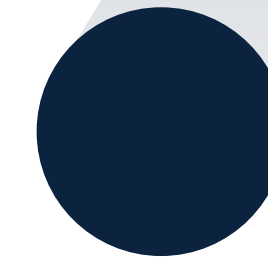

Efficiency, renewables, transport electrification and energy digitalisation.

Drivers

There are many (and growing!) incentives for sustainability projects for example, National/European incentives (eg. white certificates, heating/cooling schemes, Innovation Fund, IPCEI, regional funds/recovery plans). So there are plenty of opportunities, but the technical eligibility criteria are increasing. Companies are leaning on external expertise in order to meet the application requirements and secure funding.

How we help

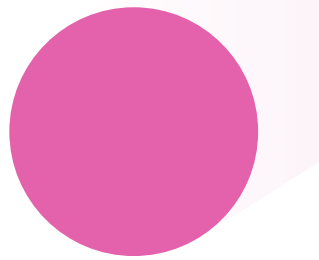

We provide integrated funding alongside engineering and execution PMO capability.

Some of the ways we help clients with incentives include:

- eligibility checks,
- business case and technical dossier development,
- application submission,
- verification and reporting.

Benefits

- Lower CAPEX,
- higher ROI,
- faster time to value for projects.
