Metering, tracking and verification (Scopes 1&2)

Is this you?

If you have net zero targets to achieve you will likely be thinking about how to effectively track and report your scope 1 and 2 emissions. To do this well, you may need additional funds for metering and monitoring which will require a clear business case.

The world is changing

On-site reporting needs are evolving. Organisations who have now made net zero commitments need to track their progress and as the old saying goes 'you can't manage what you can't measure'. Data solutions need to go beyond simply cost management.

Benefits abound

Take control of carbon and costs with our software which includes support from our dedicated team of engineers. Automated reporting allows you to easily track scope 1 and 2 emissions against targets and verify results of implemented projects.

How we help

We have a purpose built, market leading software solution, Carbon Desktop. Because we are not tied to a particular hardware provider, we are able to independently advise on the most cost-effective solution to achieve your goals via our utility distribution mapping process.
