

Reporting strategy review

Is this you?

- You report to a lot of different disclosures and you often wonder if things would be easier if you could identify areas of overlap/interoperability.
- You want to save internal time and resources by linking things where possible and working more efficiently. To do this, you need high-performing, tailored software and a roadmap to your reporting goals.
- You want to trial an improved system on a small preliminary project, to give you the confidence you need to make bigger decisions and commitments in the future.

Benefits abound

This service takes your 2028 and 2030 goals into account to deliver:

- Output reviews, where (through gap analysis and KPI mapping to disclosure criteria) our experts look at everything you currently report to and summarise how it can fit together most effectively and efficiently.
- Software appraisals, which assess the software you are currently using and/or look at other types of software you are considering to advise you on the best way forward.

The reporting landscape is changing

Businesses are reporting to more disclosures as emissions data becomes more important to stakeholders. Many organisations feel overwhelmed by all the different workstreams, and ill-equipped to streamline the process due to an internal lack of specialist knowledge. Developing an understanding of the interoperability of disclosures and reporting efficiency as we approach 2030 is crucial. You need to ensure you get maximum value out of your data and that it enables decision making/understanding across your stakeholders.

How we help

The Verco team has a long history of expertise across regulation-driven and market-driven reporting. We have specialist knowledge of past, present and future requirements and can give advice based on proven success stories.
