Scope 3 data strategy

Is this you?

- You know what your current Scope 3 (non-tenant) emissions are, but you're not sure which steps to take to reduce them.
- You want a strategy for managing and interpreting your data that makes the best use of your time and resources.
- You need a way of charting your emissions reduction over time and understanding the impacts you've had.

Benefits abound

This tailored service can include:

- Appraisals of your current software (or software options if you're considering new platforms) and advice on which ones would best support you.
- Development of a roadmap from your current position to your overall Scope 3 target – highlighting the data quality required for each next step in targeting reductions.
- Peer review, assessing where you stand compared to similar organisations.

The reporting landscape is changing

Scope 3 data accounts for a large portion of an organisation's emissions. Many companies have taken the first step and discovered what their emissions are, but moving from spend-based calculations to analysing specific supplier data can be tricky to progress. With future regulations likely to require greater Scope 3 visibility, it's important to have a view of where you need to be, and by when.

How we help

The Verco team have developed deep and proven expertise in this area so we are well equipped to advise you on best practice. Bringing in our subject matter experts reduces pressure on your internal resources. It also decreases the possibility of making decisions that may not pay off, for example investing in costly software platforms that aren't the most efficient at meeting your needs.
