# EU Innovation Fund grant opportunities

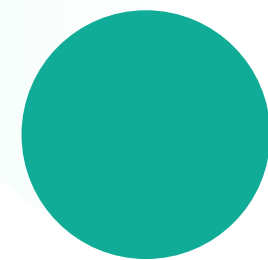

## Is this you?

You are either planning a project to enable the deep decarbonisation necessary to achieve carbon neutrality, or focused on producing innovative and clean components for hydrogen production/consumption, renewable energy or energy storage.

You are seeking a non-repayable grant that can cover both CAPEX and OPEX costs, but you lack the time needed to produce a competitive application.

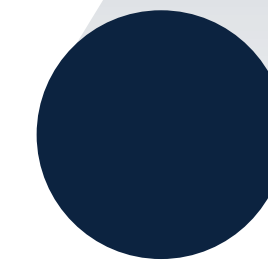

## Drivers

Funding can be a huge accelerator for innovative and sustainable projects, sometimes even the deciding factor as to whether a project goes ahead. Currently, the EU Innovation Fund is offering non-repayable grants to clean-tech manufacturing and technology-based pilot projects.

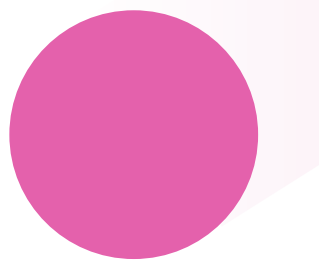

Entries close at the end of April, so there is still time to apply, but many businesses are missing out due to lack of time to dedicate to the application process.

## How we help

Our multidisciplinary team supports you throughout the application process, combining deep funding expertise with strong technical capabilities. We have submitted more than 140 project applications, securing over €5 billion in awarded funding for our clients. Our end-to-end approach ensures a structured and efficient process: we develop a clear action plan, guide you through documentation and data preparation, assess the cost effectiveness of your proposal, and provide the insights needed to maximise your competitive positioning.

## Benefits

- Maintain confidence in your emissions data by making sure your project is modelled in line with the GHG Emission Avoidance Methodology.
- Receive expert support on your application, ensuring your project proposal is competitive, compliant and optimised for the EU Innovation Fund.

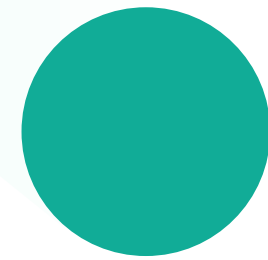

# Public and blended funding service

## Is this you?

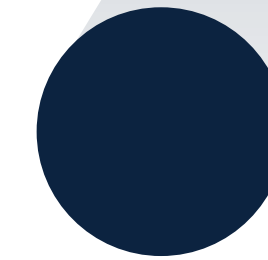

You need to identify, compare and prioritise the best funding opportunities for your sustainability-related projects and investments. You want to refine your project concepts so they better match the objectives of the most relevant funding calls. You're looking for support at all stages of the process, from finding funding opportunities to sharing quality reports and submissions.

## Drivers

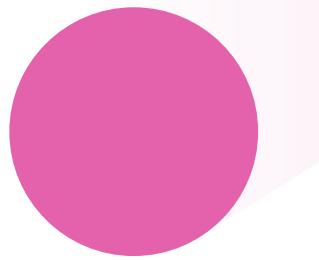

There are many funding opportunities available for high value-added sustainability initiatives. However, the landscape is competitive and it can be complex and time-consuming to apply for grants. Applicants are required to match funding requirements and demonstrate clear, quantified impact. Many businesses have limited internal capacity for this, so are seeking external expert support.

## How we help

Through our Global Funding Observatory, we monitor over 600 funding entities worldwide. As part of our end-to-end process, we use this to suggest and compare relevant opportunities. Then, we help you assess the viability of your projects against their objectives. We guide you through the process of preparing a proposal package, run compliance checks and quality assurance, and support you with your final submission. If your application for funding is successful, we can also monitor project progress, helping you organise reports, maintain the project dossier and manage deviations.

## Benefits

- Relieve pressure on internal time and resources by receiving expert support on fund-related opportunities, applications and reports.
- Reduce the risk of missing deadlines due to lack of information.
- Maintain confidence in your submissions by working to an organised action plan.
- Ensure your project proposal is competitive, compliant and optimised for the fund.
