

Sustainable transition service

“Well managed sustainability can become an operational lever that directly improves efficiency, compliance and long-term competitive advantage- and it’s verifiable.”

Valerio Anastasio
Country Leader Italy,
Sustainability and Energy
Management

Sustainable transition service

Is this you?

- You need to turn sustainability goals into concrete operational actions and demonstrate real reductions in impacts, emissions and costs across the value chain;
- You operate in energy- or resource-intensive sectors, making you subject to increasing regulatory requirements;
- You manage complex infrastructures, technological assets, and supply chains.

Drivers

Sustainable transition is now an operational priority, not just a strategic ambition. Rising energy costs, regulatory pressure, and market expectations require companies to act quickly and decisively. Many organizations face a gap between intent and execution: the direction is clear, but implementation is complex. Without concrete action, environmental, financial, and reputational risks continue to grow.

How we help

With a pragmatic and data-driven approach we measure environmental and energy performance then translate ESG objectives into concrete technical interventions, including:

- GHG accounting (Scope 1, 2, and 3) and decarbonisation and net zero target setting.
- energy management and emission reduction plans;
- optimisation of data centers, cloud solutions, and ICT infrastructure;
- eco-design, resource efficiency, and waste reduction;
- sustainable mobility, fleets, and logistics;
- biodiversity impact mitigation and nature-based solutions;
- access to sustainable finance and public incentives.

Benefits

- Improve operational efficiency and cost control
- Reduce emissions and resource consumption and improve environmental performance, with verifiable results that can be credibly communicated to stakeholders.
- Achieve confident and strong regulatory compliance and structured ESG risk management, increasing business robustness and market credibility.
- Gain access to new funding such as public incentives and sustainable finance.
