

Technology screening assessment

Is this you?

Are you a manufacturer looking at decarbonising your thermal demand? You will probably be looking at the viable technical options to achieve net zero and want to have an understanding of the sort of results these can achieve. Perhaps you are considering the 'no regret' actions to take. You will also need to understand what to rule out from your reduction strategy and how to communicate this decision making to the rest of the business.

Benefits abound

Have confidence that you are setting off in the right direction and avoiding expensive mistakes. You will have an educated overview of the best technology options for decarbonising your thermal loads and what they will achieve for your site.

The world is changing

For heat-intensive businesses, carbon reduction through optimisation will only take you part of the way towards reducing your scope 1 and 2 emissions down to zero. Decarbonisation of heat requires more significant changes and there are a myriad of technologies to help you achieve this.

How we help

We map and evaluate the key decision points and technology risks on the carbon reduction pathway.

We assess and prioritise the technologies with the best fit for your thermal decarbonisation journey along with their expected impact.
